## PROFESSIONAL SUMMARY

Solutions-minded AWS cloud architect who closes the gap between recommendation and proof — I build working prototypes, not just slide decks. As the founder of an independent development business, I act as the primary technical advisor for clients: framing trade-offs, making architectural decisions, and validating them hands-on in real environments. I lead with GenAI and agentic AI, developing daily with AI-augmented tooling (Kiro, Claude Code, Amazon Bedrock) to accelerate delivery. 15+ years across technology domains — software development, cloud, systems engineering, networking, and secure infrastructure — including a military background supporting large-scale industrial and transportation-grade operations. Military veteran, AWS-certified, and local to Atlanta.

## WHAT I BRING TO THIS ROLE

- **Forward-deployed, hands-on proof.** I build PoCs and prototypes directly in customer-style sandbox environments to validate approaches conversations alone can't settle.
- **GenAI and agentic AI in practice.** I build daily with foundation models, RAG pipelines, and AI-augmented tooling (Kiro, Claude Code, Bedrock), and steer customers away from hype toward what delivers value.
- **Trusted technical advisor.** As a founder I own architectural decisions, frame competing concerns (security vs. cost vs. speed vs. operational burden), and own the consequences when a decision needs revisiting.
- **Industrial & operations fluency.** My military signal/logistics background means I understand uptime pressure and the realities of asset- and fleet-heavy environments relevant to construction and transportation operators.

## CORE TECHNICAL SKILLS

**AWS & Cloud Architecture:** Lambda, API Gateway, DynamoDB, Cognito, Amplify (Gen 2), S3, CloudFront, EC2, RDS, IAM, CloudWatch · Serverless-first design · Scalability & security patterns · Cost/performance trade-off analysis

**GenAI & Agentic AI:** Amazon Bedrock, SageMaker · Foundation model integration · RAG pipelines · Multi-agent / agentic workflows · AI-augmented development (Kiro, Claude Code) · Model cost, latency, accuracy & safety trade-offs

**Infrastructure as Code & DevOps:** CloudFormation, AWS SAM (CDK/Terraform-ready) · CI/CD (CodePipeline, CodeBuild, GitHub Actions) · Deployment-safety practices

**Data & Integration:** DynamoDB, PostgreSQL, MySQL, Prisma ORM · REST & GraphQL APIs · Multi-service integration

**IoT & Industrial-Adjacent:** Device/sensor data, tactical network operations, telemetry, operational monitoring

**Development:** TypeScript, JavaScript, Python, Node.js · React, Next.js

**Advisory:** Pre-sales & technical consulting · Executive and developer audiences · Requirements discovery · Technical writing

## PROFESSIONAL EXPERIENCE

### Founder & Solutions Architect — Atlanta Creative Exchange LC

*Atlanta, GA · 2024 – Present*

- Serve as the primary technical partner for clients: translate ambiguous business objectives into validated architectures, then **build working prototypes and PoCs** to prove the approach before full commitment — closing the gap between recommendation and proof.
- Design and deploy serverless, cloud-native solutions on AWS (Lambda, API Gateway, DynamoDB, Cognito, Amplify, S3, CloudFront), demonstrating scalability and security patterns in real environments.
- Apply **GenAI and agentic AI** where they solve real problems, developing with AI-augmented tooling (Kiro, Claude Code, Bedrock) to accelerate delivery and validate ideas fast.
- Frame technical trade-offs (security vs. cost vs. operational burden vs. time-to-market) with a clear recommendation and articulated alternatives; flag hard-to-reverse decisions before clients commit.
- Built a **Startup Project Management System** product that manages the full client engagement lifecycle (requirements, milestones, status) — reflecting a deep understanding of how operators actually make decisions.

- Own architectural decisions end to end and stay engaged through implementation; revisit the approach with the client when real-world context warrants. Client details withheld under NDA.

### Founder & Lead Developer — ClassCast (AI-Enhanced Platform)

*Atlanta, GA · 2023 – Present*

- Took an AI-enhanced platform from concept to production serving **250+ active users**, owning every architecture and technology decision.
- Integrated AI-powered analytics and workflows, navigating practical GenAI trade-offs around accuracy, cost, and user experience.
- Shipped a second production application on **AWS Amplify Gen 2** (Cognito, DynamoDB, S3) — demonstrating repeatable, secure cloud-native delivery.

### AI Coding & Cloud Development Instructor — Cristo Rey Atlanta Jesuit High School

*Atlanta, GA · 2023 – Present*

- Teach an AI Coding Fundamentals and Cloud App Development course covering AI-assisted development, AWS architecture, and modern application design.
- Translate complex cloud and AI capabilities into clear, business-outcome narratives — the same skill required to influence senior technical leaders and moderate depth by audience.

### Earlier Experience — Technology, Networking & Operations

- **Professional Educator** (Atlanta Public Schools, Drew Charter, Cristo Rey · 2009–2014, 2023–Present) — Taught computer science and math; improved team performance 21.4%.
- **Signal Support Systems Specialist, Sergeant — U.S. Army** (2005–2009) — Senior LAN Manager running 24-hour tactical network operations for 500+ personnel in uptime-critical field environments; managed $1.5M+ in equipment with zero loss; led a team of 5 — directly relevant to industrial and transportation operations.
- **Systems Analyst — Heartland Payment Systems** (2002–2004) — Maintained network and applications in a Fortune 500 payment environment sustaining 99.9% uptime.

## FEATURED PROJECTS

- **ClassCast** · *class-cast.com* · 250+ users — AI-enhanced platform; TypeScript, Next.js, React, PostgreSQL, Prisma.
- **Startup Project Management System** — Product running the full client engagement lifecycle, built around how operators scope and track work.
- **Chord Progression App** · AWS Amplify Gen 2 · 30+ users — Serverless app (Cognito, DynamoDB, S3); end-to-end AWS delivery.
- **Multi-Tenant SaaS Architecture** *(in progress)* — Tenant-scoped app on AWS: Cognito, DynamoDB, API Gateway + Lambda, EventBridge workflows.

## HOW I MAP TO THE QUALIFICATIONS

- **4+ yrs technology domains:** 15+ years across software development, cloud, systems engineering, networking, and secure infrastructure.
- **2+ yrs design/consulting in apps & infrastructure:** Founder-led client architecture, prototyping, and advisory since 2023–2024.
- **5+ yrs IT development/implementation:** Career-long IT and development from tactical network operations to current cloud/software delivery.
- **Preferred (cloud, pre-sales, Data & AI):** Hands-on AWS architecture, founder-level advisory, and active GenAI/agentic AI and database work.

## EDUCATION & CERTIFICATIONS

**AWS Cloud Application Developer Program** — AWS Cloud Institute · 2024–2025

Scalable AWS architectures, secure networking, CI/CD automation, serverless apps, and AI/ML integration (SageMaker, Rekognition, Bedrock); 100+ hands-on labs and capstone projects.

**B.S. Computer Science, Minor in Mathematics** — South Carolina State University · 2001

**Certifications:** AWS Certified Cloud Practitioner · AWS Certified Developer – Associate · Secret Security Clearance (held) · Information Assurance Security Officer
